Linux Agent Release Changelog

v3.2.0
Release date 01/23/2023

Distributed Cloud AIP enhanced the following features in the 3.2.0 Agent release:

- ☑ Updates to copyright for the integration of F5 Distributed Cloud App Infrastructure Protection (AIP), previously Threat Stack, with F5 Distributed Cloud Services

  - ☑ **Important:** Threat Stack-branded commands, file paths, and scripts still work at this time

- ☑ eBPF

  - ☑ Improved sensor resource utilization in Kubernetes

- ☑ Process Sandboxing

  - ☑ Process Sandboxing now supports network policies for containers
  - ☑ Added new file access policies

- ☑ CRI-O

  - ☑ The Agent now supports CRI-O as a container runtime for Kubernetes deployment

- ☑ EINPROGRESS connect() System Calls

  - ☑ The Agent now monitors `EINPROGRESS connect()` system calls by default
  - ☑ You will see more `EINPROGRESS connect()` events in your environment with exit code `-115` and with success set to `No`. This means that the connection is in progress.
